

Offline five-seed BiLSTM demonstration on PIE test video

YOLO26m + ByteTrack | event-anchored box and OBD-speed model | seed-mean probability

Crossing: advance prediction

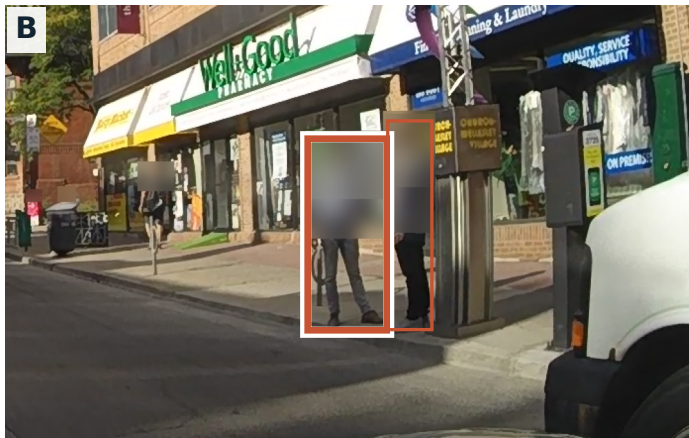

$p = 0.9383$

Ego speed: 0.0 km/h

PIE label: crossing

Prediction: flagged

46 frames before onset

Non-crossing: stationary

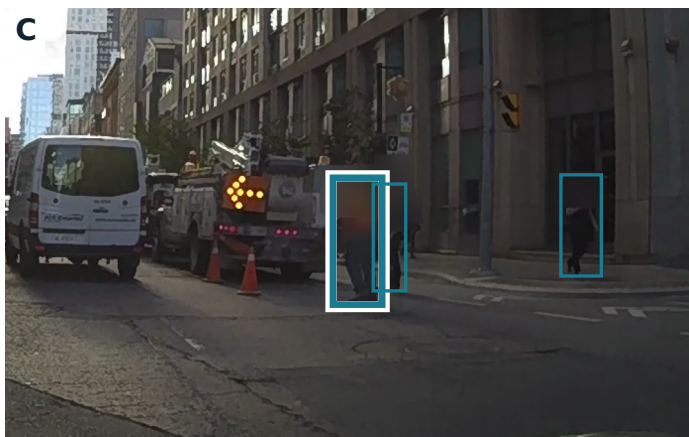

$p = 0.8430$

Ego speed: 0.0 km/h

PIE label: non-crossing

Prediction: flagged

video_0012, frame 3650

Non-crossing: moving

$p = 0.0078$

Ego speed: 28.0 km/h

PIE label: non-crossing

Prediction: not flagged

video_0016, frame 1295

Thick box: annotation-matched tracked target. Thin boxes: other tracked pedestrians. Faces blurred.

Fixed validation threshold = 0.4580. Each probability uses a contiguous 16-frame window ending at the shown frame.
